

DWA_03.5 Knowledge Check_DWA3.2

1. User story(ies) in Gherkin syntax for the "+" button.

- As a user, I want to be able to increment the tally count by 1 when I click the "+" button, so that I can keep track of a number.
- As a user, I want to be able to disable the "+" button when the tally count reaches the maximum value, so that I cannot increment the tally count beyond the maximum value.

Scenario 1: Increment the tally count by 1

Given the tally count is 0

When I click the "+" button

Then the tally count should be 1

Scenario 2: Disable the "+" button when the tally count reaches the maximum value

Given the tally count is 15

When I click the "+" button

Then the tally count should be 15 And the "+" button should be disabled

2. User story(ies) in Gherkin syntax for the "-" button.

- As a user, I want to be able to decrement the tally count by 1 when I click the "-" button, so that I can keep track of a number.
- As a user, I want to be able to disable the "-" button when the tally count reaches the minimum value, so that I cannot decrement the tally count beyond the minimum value.

Scenario 1: Decrement the tally count by 1

Given the tally count is 1

When I click the "-" button

Then the tally count should be 0

Scenario 2: Disable the "-" button when the tally count reaches the minimum value

Given the tally count is -5

When I click the "-" button

Then the tally count should be -5 And the "-" button should be disabled
